SUMMARY

Full-stack engineer, backend-to-edge, building data-heavy platforms and the AI tooling that runs them. Author of SwarmEngine, an open-source multi-agent orchestrator (github.com/JaviPardox/SwarmEngine).

Co-founder & CTO of Dalmar Ventures, setting technical direction for Toorizta, an AI-powered travel platform.

Software Engineer at Roadguard: cloud, web, edge and fleet infrastructure for roadside tire safety.

EXPERIENCE

Co-founder & CTO

04/2026 - Present

Dalmar Ventures S.L. (Toorizta) ↗

Set the technical direction for Toorizta, an AI-powered travel platform: travellers discover destinations, then book hotels, tours, transport and full itineraries in one place, with an internal dashboard where AI agents work alongside the team. Built so AI assistants can use the platform as easily as people can. Own architecture, security, payments and the release path to production.

Software Engineer

03/2025 - Present

Roadguard AS ↗

Lead engineer across cloud, web and edge. Built the multi-tenant operator dashboard — live camera streams, per-vehicle tyre reports, shareable inspection links, and traffic analytics by vehicle type, nationality and location — plus the public website. Migrated the platform from Azure to AWS (Kubernetes, registries, multi-TB object storage). Built the computer-vision pipelines that isolate each passing vehicle and measure tyre wear from roadside camera streams, and the licence-plate matching that links reads to vehicles under GDPR retention limits. Automated provisioning and network-boot imaging for the roadside device fleet, wrote MCU firmware (ATtiny412, STM32) and industrial camera drivers, and added fleet-wide monitoring. Secured 10TB+ of detection data with Keycloak SSO. Built the Rust fleet control service and the React Native driver app.

Software Engineer

10/2023 - 03/2025

Bio-Me - Microbiome profiling ↗

Architected data/analytics platform; +20% pipeline throughput, -35% storage; led workflow automation and intern mentoring (16 features shipped).

Junior Software Engineer

10/2021 - 10/2023

Bio-Me - Microbiome profiling ↗

Built distributed pipelines (+200% efficiency, -31% storage); added operational tooling/automation; strengthened automated testing.

Transportation Engineer Technician

09/2020 - 03/2021

Caltrans ↗

Automated infra monitoring/QA pipelines; added compliance dashboards; documentation ~25% faster.

Electrical/Computer Engineering Tutor

08/2018 - 12/2019

California State University Chico ↗

100 students in computer architecture, data structures and embedded systems; workshops lifted performance ~17%.

Software Engineer Internship

06/2016 - 08/2016

AI Talentum ↗

Built Twitter data ETL/analytics; real-time pipelines for ML use.

EDUCATION

Project Management Universitat de Barcelona - Master's degree Average: B	03/2023 - 03/2024
Data Science UC Berkeley - Bootcamp Average: A	11/2020 - 06/2021
Computer engineering California State University Chico - Bachelor's degree • Minor in Computer Science & Physics • Tau Kappa Epsilon, Theta Pi Chapter - Founder • Invited to the Engineering Honor Society (Tau Beta Pi) • Tau Beta Pi, Alpha Alpha Chapter - IT Manager & Corresponding Secretary • 3 times Dean's List award Average: B	08/2015 - 12/2019

SKILLS

Python	Advanced	Embedded Linux	Advanced
TypeScript	Advanced	Observability	Advanced
React	Advanced	SQL	Advanced
FastAPI	Advanced	AI Agents	Advanced
Docker	Advanced	Next.js	Intermediate
Kubernetes	Advanced	Rust	Intermediate
AWS	Advanced	C	Intermediate
Azure	Advanced	React Native	Intermediate
Ansible	Advanced	Julia	Intermediate
CI/CD	Advanced		

LANGUAGES

Spanish	Native	French	Intermediate
English	Fluent
